

ARTICULAR DISC PROSTHESIS FOR TRANSFORAMINAL INSERTION**Abstract of the Disclosure**

[0246] A prosthetic device for transforaminal insertion into an intervertebral space is provided. The prosthetic device includes a first component having a first curved flange for engaging a first vertebra from a transforaminal approach, the first component having a first articular surface, and a second component having a second curved flange for engaging a second vertebra from a transforaminal approach, the second component having a second articular surface for cooperating with the first articular surface to permit articulating motion between the first and second components.
